

Math Worksheet: Equations of lines (1)

1. Find the equation of the line defined as follows:

A. It passes through the points $(-3, 3)$ and $(0, 6)$.

$$\text{slope: } m = \frac{6-3}{0-(-3)} = 1$$

$$y - y_1 = m(x - x_1) \Rightarrow y - 6 = 1 \cdot (x - 0), \underline{y = x + 6}$$

B. It passes through the point $(1, 0)$ and is perpendicular to the line

$$-2x + 4y = 2 \quad m_2: \text{slope of } -2x + 4y = 2 : m_2 = \frac{1}{2}$$

$$m_1 \cdot m_2 = -1 \Rightarrow m_1 = -2, \quad y - 0 = -2(x - 1)$$

C. It has a slope equal to -3 and a y intercept at $(0, 4)$.

$$\underline{y = -2x + 2}$$

$$y = -3x + 4$$

2. Find the slope and the y intercept of the line $5x + 4y = -8$

$$\text{slope } m: y = -\frac{5}{4}x - \frac{8}{4}, \quad m = -5/4$$

$$y\text{-int: } (0, -2)$$

3. Find the equation of the line passing through the point $(1, 2)$ and has slope equal to -4 . Graph the equation.

$$y - 2 = -4(x - 1)$$

$$y = -4x + 6$$

$$x = 0 \quad y = 6$$

Another point to check.

$$x = 2, \quad y = -2$$
