

Trigonometry Worksheet: Double Angle Formula (1)

1. If  $\sin(\alpha) = \frac{3}{5}$  and  $\alpha$  is an acute angle, use the double angle formulas to find exact values of  $\sin(2\alpha)$ ,  $\cos(2\alpha)$ ,  $\tan(2\alpha)$ , and the quadrant of angle  $2\alpha$ .

$$\text{Given } \sin \alpha = \frac{3}{5} \Rightarrow \cos \alpha = \sqrt{1 - \sin^2 \alpha}$$
$$\cos \alpha = \sqrt{1 - \frac{9}{25}} = \frac{4}{5}$$

$$\text{A) } \sin(2\alpha) = 2 \sin \alpha \cdot \cos \alpha = 2 \cdot \frac{3}{5} \times \frac{4}{5} = \frac{24}{25}$$

$$\text{B) } \cos(2\alpha) = \cos^2 \alpha - \sin^2 \alpha = \left(\frac{4}{5}\right)^2 - \left(\frac{3}{5}\right)^2$$
$$= \frac{7}{25}$$

$$\text{C) } \tan(2\alpha) = \frac{\sin 2\alpha}{\cos 2\alpha} = \frac{\frac{24}{25}}{\frac{7}{25}} = \frac{24}{7}$$

From [www.anlyzmath.com](http://www.anlyzmath.com)

$\sin(2\alpha)$ ,  $\cos(2\alpha)$  and  $\tan(2\alpha)$  are all positive, hence  $2\alpha$  is in quadrant (I).
